- |             |               |                     |                     |                   |                    |      |             |        |
|-------------|---------------|---------------------|---------------------|-------------------|--------------------|------|-------------|--------|
| Median      | Histogram     | Data                | Mode                | Experiment        | Controls           | Mean | Correlation | Random |
| Sample      | Range         | Normal Distribution | Random presentation | Theory            | Correlation        |      |             |        |
| coefficient | Personal bias | Survey              | Replicate           | Scientific method | Standard Deviation |      |             |        |
|             |               |                     | Hypothesis          |                   |                    |      |             |        |

## **Across**

1. The simplest measure of variability, represented by the difference between the highest and the lowest values in a frequency data
5. Constraints that the experimenter places on the experiment to ensure that each subject has the exact same conditions
6. A kind of research in which the researcher controls all the conditions and manipulates them
7. A sample group of subjects selected by chance
9. Pieces of information, especially gathered by a researcher to be used in testing a hypothesis
13. A measure of central tendency where it occurs most often in the data
14. A testable explanation for a set of facts or observation as research
15. A number between -1 and 1 = degree of relationship
17. A study over to see whether the same results are obtained
18. The measure of central tendency most often used to describe a set of data
19. An experimental method in which questions are asked to subjects
20. A statement predicting the outcome of a scientific study

## **Down**

2. A bell-shaped curve, describing the spread of a characteristic
3. A process by which chance alone determines the order in which the stimulus is presented
4. A measure of variability that indicates the average difference between the scores and their mean
8. Five step process for empirical investigation of a hypothesis
10. The researcher allowing personal beliefs to affect the outcome of a study
11. A relationship between variables, in which changes in one variable are reflected in changes in the other variable
12. A bar graph depicting a frequency distribution. The height of the bars indicates the frequency of a group of scores
16. A measure of central tendency for a distribution, represented by the score that separates the upper half of the scores
